Chatbots and Conversational Systems

What are Chatbots

- O1 Chatbots are systems that can talk to humans in a humanly way. It helps to hook your customers to your business and tell them what is in it for them.
- Voice and video are optional, but it provides you with an opportunity to tell your customers clearly what you are going to provide them as products and/or services.
- O3 Chatbot establish credibility to make your customers feel comfortable with your company, by not making them spend too much time waiting to get support.

Chatbotku

What Makes Chatbotku Better?

Chatbotku integrates a variety of advanced features like data analytics and automated revenue generation capabilities with normal chatbots, which helps to make your chatbot a complete digital workforce for your business.

WHY?

What Chatbotku is trying to solve

Getting good business leads in hard times is challenging

Finding a business lead nowadays, that turns to revenue, is like hunting for a needle in a haystack

Getting hundreds of repetitive customer queries every day is burdensome

Customer support staffs and marketing teams often get queries that are repeated every hour, every day.

Customer interaction data and transcripts is hard to collate

When customers interact with a business using multiple channels, it is hard to store the conversations.
